

Affordable Dental Implants

We love improving patient's lives and that's why you can rest assured Dental Implants can be an affordable option at Frederick Dental Group. Dr. Dave and Arpana Verma have extensive experience in providing Dental Implants. With the latest technology implants have been quite predictable with success rates of 98 %. Dr. Dave says, "having a dental CBCT machine makes evaluation and placement very predictable. CBCT technology allows us to see in 3D the exact size implant needed or whether bone grafting will be needed to allow for the placement of an implant or sadly an implant cannot be done." With modern CBCT technology alongside digital impressions one can overlay the two and see exactly where the implant and implant crown need to go to allow for proper form and function. Surgical guides can also be fabricated to allow for more precise surgical placement.

Dental Implant Special for our Frederick Dental Group Family of patients.

\$999 Reg \$2001 – Endosseous Dental Implant
